Beekeeping with ELFET and Shungite

Bees are highly sensitive to electro-magnetic frequency(EMF). Shungite has a proven ability to neutralize EMF

about ELFET technology

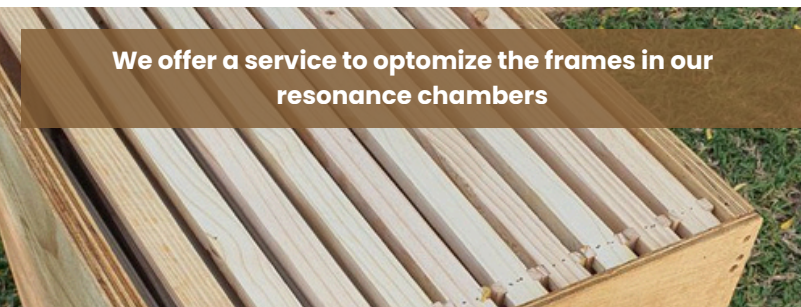

ELFET is a chemical free innovation that uses a bio-mimicry process to impart naturally optimised resonances into materials.

ELFET uses proprietary frequency techniques and software to produce various products with proven track records.

These combined processes can best be described as "electromagnetic tempering or conditioning".

We offer a service to optimize the frames in our resonance chambers

ELFET treated Shungite

All our Shungite items have been treated in the ELFET resonance chamber for up to 48 Hours. With the natural resonances embedded into the Shungite, you will have the best of both worlds

By combining the remarkable protective properties of Shungite with ELFET's innovative technology, your beehives will not only survive, but thrive!
